

Project Initialization and Planning Phase

Date	1 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
A policymaker in a developing country	Assess my country's human development status	I don't have one tool that combines health, education & income data	HDI requires manually gathering & normalizing multiple indicators	Uncertain about where to prioritize investments

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A policymaker in a developing country.	Assess my country's human development status.	I don't have one tool that combines health, education and income data.	HDI computation requires manually gathering and normalizing multiple indicators.	Uncertain about where to prioritize investments.
PS-2	A researcher studying global development trends.	Compare human development levels across many countries.	Manual computation of HDI is slow and error-prone across large datasets.	I have to source and normalize life expectancy, schooling, and GNI data from different databases.	Frustrated by delayed and inconsistent insights.
PS-3	A citizen curious about my country's development ranking.	Understand where my country stands among Very High, High, Medium and Low HDI tiers.	I don't have the statistical background to compute or interpret the index.	HDI involves multiple weighted indicators and normalization formulas.	Excluded from understanding my own country's progress.
