Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS - I need one clear number that tells me where my country stands. - Give me something more complete than GDP alone. - I don't have time to recompute this every quarter by hand.	<i>Policymaker / Government Analyst</i>	THINKS - Am I directing resources to the areas that need them most? - How reliable is this if data quality varies across countries? - Could outdated indicators mislead my decisions?
DOES - Gathers life expectancy, education and income data from multiple sources. - Cross-checks HDI calculations against global reports. - Presents development scores to senior government committees.		FEELS - Overwhelmed by fragmented, hard-to-combine data sources. - Anxious about deciding on incomplete information. - Reassured when a clear, trustworthy score is available.
