

Customer Journey Map

Date	2 July 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	2 Marks

Customer Journey Map

Map of the user's experience with the HDI Prediction System, stage-by-stage, capturing actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1 Discover & Explore	Stage 2 Input Data & Predict	Stage 3 Review & Act on Results
Actions <i>What does the customer do?</i>	- Visits the HDI Prediction System site out of interest in country development comparisons - Reads the overview explaining what HDI measures (life expectancy, education, GNI per capita) - Reviews the four development tiers: Very High, High, Medium, Low	- Enters values for life expectancy, mean years of schooling, expected years of schooling, and GNI PPP per capita - Selects a scenario type (developed nation, emerging economy, or country needing intervention) or enters custom figures - Submits the form to run the prediction model and waits for the classification	- Views the predicted HDI tier (e.g., Very High, Medium, or Low) for the entered country profile - Compares the outcome against the three example scenarios described on the platform - Uses the insight to inform research, a policy discussion, or further country comparisons
Touchpoint <i>What part of the service do they interact with?</i>	- Website landing page (human-development-in-2jwh.bolt.host) "About HDI" description section - Navigation menu leading to the prediction tool	- Data input form on the prediction tool "Predict" / "Submit" button - Processing/loading indicator while the model runs	- Results screen showing the predicted HDI classification - Scenario comparison panel (Very High / Medium / Low examples) - Option to adjust inputs and re-run the prediction
Customer Thought <i>What is the customer thinking?</i>	"What exactly goes into this index?" "Will this tool give me a useful, credible comparison?" "I want to see how a country I care about measures up"	"Did I enter these figures correctly?" "I wonder how much a small change in schooling years shifts the result" "This is much faster than working out the index manually"	"This result matches what I expected" or "this reveals a real development gap" "Which indicator is holding the score back the most?" "I could use this to compare several countries side by side"
Customer Feeling <i>What is the customer feeling?</i>	Curious, and a little unsure about how the tool works	Focused and slightly anxious while waiting for the prediction	Informed and satisfied; occasionally concerned when a low tier exposes development gaps
Process Ownership <i>Who is in the lead on this?</i>	Product / Content team — site content, HDI explainer, and onboarding	Data Science / ML team — prediction model, input validation, form logic	Product & Research team — results interpretation and reporting features

Opportunities <i>How can we improve this stage?</i>	• Add a short explainer video or tooltips defining each indicator • Provide sample/reference inputs for well-known countries • Clarify how the four tiers are defined up front	• Add real-time input validation with typical value ranges for each field • Show a progress or confidence indicator while the model runs • Allow saving of frequently-used country profiles	• Let users download/export the prediction as a report • Add a multi-country side-by-side comparison view • Surface which indicator most affected the score, with suggested policy levers
