

Problem-Solution Fit

Date	2 July 2026
Team ID	
Project Name	A Comprehensive Measure of Well Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Government policymakers, national development analysts, and researchers at international development organizations.	6. CUSTOMER LIMITATIONS <i>EG. BUDGET, DEVICES [CL]</i> Limited statistical expertise, no budget for paid analytics platforms, patchy internet access, and tight reporting deadlines.	5. AVAILABLE SOLUTIONS <i>PROS & CONS [AS]</i> UNDP reports: authoritative but only updated annually. Manual spreadsheets: full control but slow and error-prone. Generic BI tools: flexible but lack built-in HDI methodology.
2. PROBLEMS / PAINS <i>+ ITS FREQUENCY [PR]</i> Cannot quickly classify a country's development tier from raw indicators; recurs every reporting cycle and delays policy decisions.	9. PROBLEM ROOT / CAUSE [RC] HDI requires combining, normalizing, and weighting life expectancy, education, and income indicators using UNDP's formula, which is not automated in most public tools.	7. BEHAVIOR <i>+ ITS INTENSITY [BE]</i> Repeatedly cross-references World Bank, UNDP, and national statistics to recalculate scores; intensity peaks during budget and policy planning.
3. TRIGGERS TO ACT [TR] An upcoming budget allocation cycle, a new UNDP report deadline, or a minister requesting an updated development comparison.	10. YOUR SOLUTION [SL] A predictive model and dashboard that takes life expectancy, mean/expected years of schooling, and GNI per capita as inputs and instantly classifies a country into Very High, High, Medium, or Low HDI tiers. Lets policymakers simulate custom indicator values to test development scenarios in real time.	8. CHANNELS OF BEHAVIOR [CH] ONLINE Government data portals, UNDP / World Bank websites, internal analytics dashboards.
4. EMOTIONS <i>BEFORE / AFTER [EM]</i> Before: overwhelmed and uncertain due to fragmented data. After: confident and reassured with a clear, instant classification.		OFFLINE Ministry briefings, printed policy reports, in-person committee meetings.
